Description

The Model 21 process pH sensor features the Plunger pH electrode design which permits 360° sensor mounting. The porous Teflon[®] liquid junction resists fouling and chemical attack. Double junction reference cells increase the service life in applications containing sulfides (H₂S) and metals such as lead, mercury and silver. The new cast-in-place solid reference electrolyte helps maintain a constant reference cell potential by resisting dilution over time with pressure and temperature changes. The new capillary temperature sensor design places the Pt100 or Pt1000 TC behind the pH sensitive membrane for accurate temperature compensation and measurement. The TOP68 quick disconnect cable system provides ease of use and the reliability of fixed cable. The IP68 environmental rating protects the high impedance pH electrode signal from moisture resulting from condensate build up in submersion pipes.
